

Build your own LEGO® Raspberry Pi case

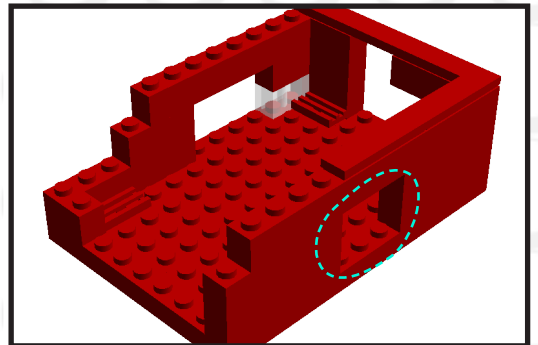

The footprint of your Raspberry Pi case should be a minimum of 13x9.

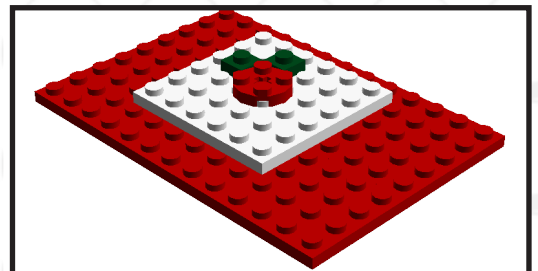

The sides are built using 1 dot width bricks. If you want to use the wider 2 dot you need to make your base larger accordingly.

It is a good idea to raise the Raspberry Pi with the radiator grille bricks.

Leave spaces for all your connectors/ports. You could add doors/shutters/hinges etc. Use the smooth top bricks to finish the sides.

Finally make a lid for your base.
