

Noteable

The **Noteable** service at the University is a cloud based service providing Jupyter Notebooks. Computational notebooks allow you to create and share live code, equations, visualisations and explanatory text. After a success pilot phase Noteable is now a full service, available to all staff for use in teaching. All details about Noteable and how to use the service are [here](#).

If you are ready to add the LTI link to the Noteable service within Learn, there are instructions on how to add Noteable to your Learn course site [here](#).
