Media Hopper

Media Hopper is the umbrella term for video-related services at the University of Edinburgh.

Media Hopper Create is the (original) Media Hopper service and is sometimes referred to as the 'University's YouTube'. It is both a recorder and a player. Download the recorder to record your screen, audio and video (or any combination thereof) and upload to the dedicated streaming server. You can choose to publish privately, to a limited audience or to the world. You can generate subtitles for your recording. Additionally, you will be prompted to assign a license to your recording.

Media Hopper Replay is the name given to the lecture recording service. If you'd like to record your on campus lectures, notify the Teaching Office (email [here](#)), and they can ensure you are timetabled in a supported room. If you'd like to record a lecture / seminar / presentation which isn't in a supported room, please [get in touch](#) with ILTS.

In January 2021, a newsletter was produced by ISG to clarify the differences (and similarities) between the services under the Media Hopper umbrella. The newsletter is currently available [here](#).
