

# PARTY POPPER – IKEA

The work included in this blog post is a continuation of the last. To accompany the manual and poster, which relies upon graphics alone to communicate the idea, I wanted to model the product itself. Using 3D modelling software known as Rhino, I've created what I imagine to be the packaging of my product, SPRÄNGA, which in Swedish translates to "BLAST". In this rendering, the product features 100 party poppers, to be bought for any occasion. The packaging, much like that of most Ikea products, is simple and to the point. This packaging would of course be entirely recyclable, minus the plastic film which would wrap around it.

Above, using the modelled party poppers, I've outlined the simple steps once again. Applying a silver rendering, in an attempt to add to depth.
