# MAPPING THE SOUNDSCAPE — MY FLAT PT.2

Using the models created in the last post as reference, I created an illustration of my flat's floorplan, and coloured each room in different shades according to sound volumes. Darker shades represent louder spaces, and lighter represents quieter.

I replicated this in an attempt to illustrate the sounds of many rows of flats, or a little neighbourhood. The pattern created draws links to earlier projects, especially my work on *Islamic geometric patterns*.
