

Ellipses and primitives—week 7

with the help line, I sketch down several shapes and ellipse. I found cuboids as a basic shapes can used to draw so many other different shapes and also combination of several primitive shapes. In the sketches above, I used free hand to practice my drawing skills. Although some of the line still don't goes strait, I started to get the correct shapes and outline.

During this exercise, saw how ellipse being draw quickly and accurately with the grid. And how the angles of the ellipse changed with the angle of the grids. In the part of turning it to 3D, I draw by freehand and digitally. Free hand drawing is a bit harder to control the straight lines and curves but looks more natural.
