

More about Blogs.ed and Plugins

Processes and Plugins

I admit, I may be cheating a little here. As part of HeyPresstoConf20 I really wanted to be able to talk about our Plugins and Processes but couldn't fit into the Tweet limit so I'm putting it all here. This should be helpful if you are planning on building your own WordPress Multisite at your institution, as ever, if you want to discuss this feel free to get in touch.

Firstly let's talk about how we go about selecting Plugins. We start to look when multiple users all ask for the same of similar plugin/function or if we encounter and issue that needs a plugin to be resolved. Thankfully we have an inhouse development team that can be called on if we cannot find something which is a blessing but they support multiple platforms so we do need to have good reason. If we do find a plugin or multiple plugins then we start to investigate whether they actually resolve our issue and if they add any issues or have unexpected behaviour, so far this seems to make basic sense. We have, however, developed a process to audit plugins to ascertain whether they are well supported, well reviewed and also if they contain privacy invasive cookies using the following criteria:

Plugin / theme name:	Yes / no	Comments	Date requested	Date installed
What does it do?				

How much does it cost? <ul style="list-style-type: none"> • Cost of adoption • Cost of training • Cost of usage 				
Author background				
Is the documentation good?				
Who will use the add-on? <ul style="list-style-type: none"> • admins / authors 				
Feedback / reviews <ul style="list-style-type: none"> • Is it used by many, reviews / comments 				
Technical status: <ul style="list-style-type: none"> • Is it up to date, compatible with our version of wordpress? <ul style="list-style-type: none"> • Is it well written? • Does it backup/restore? <ul style="list-style-type: none"> • Is it secure? • Is data shared outside of wordpress? <ul style="list-style-type: none"> • Type of cookies set 				

<p style="text-align: center;">Accessibility:</p> <ul style="list-style-type: none"> • Check any spellcheck functionality on free data entry boxes/forms that is either automatically run by the system or that requires users interaction <ul style="list-style-type: none"> • Describe any data validation that is automatically run by the system to ensure users enter data in the correct formats. Check error messages are in sufficient colour contrast, accessible font, clear location, not pop ups. • Check whether the template scales correctly using different resolutions and whether there are any resolutions that are not recommended, tested using ctrl + and Windows Magnifier • Check the colours and colour contrasts and font types and styles used i.e. are italics and continuous capitals avoided? • Check functionality that would allow users to customise their views (i.e. font size, colours, contrast ratios). This is by altering browser settings. <ul style="list-style-type: none"> • Check whether all content is accessible through a keyboard interface and whether it requires specific timings for keystrokes. I.e. is it possible to navigate around the template and complete any forms etc without ever using a mouse. • Check there is an indication or warning of links which will open a new tab or window and check that these warnings are accessible • Check that the template conveys no information in only colour or sound. • Check there is no flashing or scrolling text? If so does the text flash 3 or more times per second and can it be paused? If there is flashing or scrolling text please provide more details. • Check that Zoomtext is compatible with the template without plug ins • Check that JAWS is compatible with the template without plug ins • Check that TextHelp Read and Write Gold is compatible with the template in terms of spellcheck, hover highlight and highlight and read without plug ins. <ul style="list-style-type: none"> • Check that tooltips are clear and enabled by default on the template. • Check that there are text alternatives for any non-text content. • Check that for any audio/visual items are there captions available and theses have been checked for accuracy. <ul style="list-style-type: none"> • Check there are no time limits prescribed for the viewing/inputting of content to the template • Check what specialist help is linked to on the template and that this includes a method of contacting someone for assistance? <ul style="list-style-type: none"> • Check that if the template is accessed via a mobile or tablet device the user system does not require to use any requires any specific timings/specific keystrokes to complete tasks • Check the template works with mobiles/tablets to offer any text to speech functionality of the results for those with visual impairments?
